PROFILE

Cybersecurity student with hands-on experience building secure applications, APIs, and real-world security projects. Skilled in Python, backend development, authentication, vulnerability assessment, and threat detection, with practical exposure to OWASP Top 10 risks, penetration testing tools, and incident response workflows. Strong interest in solving real-world cybersecurity challenges.

EDUCATION

Bachelor of Engineering in Cybersecurity

2023 - 2027

SRM Valliammai Engineering College, Chennai | CGPA: 7.24/10

TECHNICAL SKILLS

Languages: Python, HTML/CSS

Cybersecurity Tools: Burp Suite, Nmap, Wireshark

Developer Tools: Git, Docker, VS Code, GitHub

Frameworks: FastAPI, Node.js, Express.js

Databases: MySQL

Operating Systems: Linux (Kali Linux), Windows

Security Concepts: OWASP Top 10, Vulnerability Assessment, Penetration Testing, Threat Detection & Intelligence, Incident Response, Network Security, API Security, Role-Based Access Control (RBAC), Authentication & Authorization, Encryption

PROJECTS

KOVIRX – Threat Detection & Security Operations Platform

React, Node.js, Express, MongoDB, JWT, Docker

- Built a full-stack cybersecurity platform for real-time threat monitoring and incident management.
- Implemented secure JWT authentication, role-based access control, rate limiting, and intrusion logging.
- Developed interactive dashboards for security alerts, threat analysis, and incident investigation.

Hustlefy – Job Matching Platform

Startup Initiative, MSME Registered

Node.js, Express, React, MongoDB, Firebase, Capacitor

- Implemented secure authentication with Firebase, JWT middleware, and email verification for dual-role users.
- Built real-time dashboards and workflows for job lifecycle management and automated task fulfillment.
- Enabled cross-platform Android deployment using Capacitor for hyperlocal gig discovery.

Phishguard – Anti-Phishing Extension

Python, Flask, JavaScript, Chrome Extension, Random Forest

- Created a browser extension that checks visited websites and warns users about possible phishing threats.
- Combined machine learning with URL analysis to identify suspicious links and malicious patterns.
- Built a secure Flask backend with API protection, rate limiting, CORS controls, and threat logging.

ACHIEVEMENTS

Winner, INFYRA CTF'25 – Cybersecurity Capture the Flag (CTF) Competition

National Level

4th Place, 0xTi CTF – 24-hour Cybersecurity Capture the Flag (CTF) Competition

National Level

10th Place, Kalachakra CTF – 24-hour Cybersecurity Competition (ranked 10th of 250 teams)

National Level

5th Place, WTF CTF 3.0 – Cybersecurity Capture the Flag (CTF) Competition

Inter-College

5th Place, OSDHack 2026 – National-level Applied AI & Machine Learning Hackathon

National Level

CERTIFICATIONS

- Penetration Testing – SRM Valliammai Engineering College (Value Added Course)
- [Generative AI Foundations Training Badge](#) – AWS Academy
- Networking – Cisco Networking Academy

LEADERSHIP AND EVENT ORGANIZATION

- Project Lead, Hustlefy – Led the development of an MSME-registered hyperlocal gig marketplace from idea to prototype.
- Team Leader, 0xTi CTF – Led a team during a 24-hour CTF at Rajalakshmi Engineering College.
- Member, Whitehatians Club – Active participant in cybersecurity-focused club activities.
